INTRODUCTION

RIDE BNB 2.0 refers to an upgraded version of RIDE BNB, a tokenized rewards system built on the BNB Chain ecosystem, often associated with decentralized finance (DeFi) or gamified ride-sharing platforms. It aims to enhance user benefits and scalability.

It combines the power of blockchain with practical use cases like ride-sharing and reward programs, offering faster, more cost-effective, and decentralized solutions. It benefits users, developers, and investors while expanding the utility of the BNB Chain ecosystem.

WHAT IS SMART CONTRACT

A *Smart Contract* is a self-executing digital agreement encoded in code, operating on blockchain platforms like Ethereum. It automates contract enforcement, enhancing transparency, security, and efficiency by eliminating intermediaries. Widely used in sectors like finance and supply chain management, smart contracts streamline processes and build trust through decentralization. However, they also face challenges, such as code vulnerabilities and legal complexities.

WHAT IS BNB?

BNB Blockchain includes:

- Binance Chain: Fast, decentralized trading.
- Binance Smart Chain (BSC): Smart contracts and dApps with low fees.
- BNB Token: Used for fees, staking, and utility within the Binance ecosystem.

Together, they support trading, DeFi, and decentralized applications.
